Rahul Keswani

Senior Software Engineer @ Twilio | NYU | 6+ YOE with focus on building scalable, high performance and distributed backend systems using modern infrastructure tools.

San Jose, California, United States

Summary

I am a passionate and results-driven Software Engineer with over 5 years of experience designing, developing, and scaling high-performance backend systems. I specialize in crafting robust, scalable APIs and microservices architecture that handle millions of transactions efficiently.

During my tenure at Twilio, I led the successful design and implementation of the voice costing pipeline, delivering annual savings of \$20K and improving costing accuracy by 10% for all voice calls. I also played a key role in the development of APIs and the design of user interfaces to migrate routing management, which resulted in significant savings of \$1M/year in third-party contracts. In addition, I have worked on improving the reliability of our services, working across pillars such as deployment quality, availability, incident resolution, and capacity. My expertise extended towards ensuring Twilio's compliance and uninterrupted operations in several countries by enabling Emergency calling. I also developed APIs for Twilio's Interconnect VPN product to unlock self-service, effectively overcoming scalability limitations.

I enjoy solving complex technical challenges while delivering solutions that meet business objectives and enhance user experiences.

Beyond coding, I thrive on mentoring junior engineers, collaborating across cross-functional teams, and contributing to a culture of continuous learning and improvement.

Core skills:

- Java, Python, Javascript, Dropwizard, AngularJS
- MySQL, Redis, Kafka

- AWS, Docker, Terraform
- Jenkins, JUnit, Mockito, Load testing, Chaos testing
- Performance tuning and Scalability

Experience

Twilio

6 years 6 months

Senior Software Engineer

February 2024 - Present (1 year 11 months)

California, United States

Software Engineer II

February 2021 - March 2024 (3 years 2 months)

Mountain View, California, United States

Software Engineer

July 2019 - March 2021 (1 year 9 months)

Mountain View, California

Fueling the future of cloud based communication.

Thomson Reuters

Software Engineer Intern

February 2019 - May 2019 (4 months)

Greater New York City Area

- Built a text chat parser using Java to parse chat transcripts and store them in a SQL database.
- Performed Data Analysis on customer chat transcripts to understand their sentiment and most frequently asked queries using Python.
- Building phase II of the notification system which will provide more advanced alerts.

NYU Courant Institute of Mathematical Sciences

Classroom Assistant

September 2018 - December 2018 (4 months)

Greater New York City Area

Graduate Classroom Assistant for Data Management and Analysis course (CSCI-UA 0480-007) in the Department of Computer Science at NYU Courant institute of Mathematical Sciences.

New York University - Polytechnic School of Engineering
Graduate Teaching Assistant
September 2018 - December 2018 (4 months)
Greater New York City Area

Graduate Teaching Assistant for the Information Visualization course (CS-GY 6313-INET) in the Department of Computer Science and Engineering at NYU Tandon School of Engineering.

Thomson Reuters
Software Engineer Intern
May 2018 - August 2018 (4 months)
Greater New York City Area

- Built internal data analytics tools to help the Reuters News Agency product and sales team make data-driven decisions.
- Integrated Apache Superset to generate real-time dynamic data visualization abilities to help the team make data-driven decisions.
- Implemented additional front-end and back-end features to Reuters Agency Customer Engine (ACE) allowing the sales and the marketing team to access customer data in an efficient way.
- Implemented two Machine Learning models, Random Forest and XGBoost to predict customer churn and to generate a customer health score.
- Applied Weight of Evidence and Information Value techniques for feature engineering to generate the customer health score.
- Built a notification system for Reuters sales and accounts team to provide them usage alerts regarding their accounts using Elasticsearch and AWS SES.
- Established a POC for integrating a Content Management System (CMS) to Reuters Liaison web application.
- Technologies used: Python, JavaScript, PHP (Laravel Framework), Apache Superset, Elasticsearch, AWS SES.

M76 analytics
Intern
November 2016 - January 2017 (3 months)
Mumbai, Maharashtra, India

- Started learning R and how it can be used in Data Analytics and Visualization.
- Implemented various Data Mining, supervised and unsupervised algorithms like K-Means, K-Nearest Neighbor, Linear Regression, Logistic Regression, Decision Trees and Random forest on in built datasets in R.

- Was asked to work on a bank dataset and predict the churn value. After analyzing the learning models, shortlisted 3 which could be used. They were Logistic Regression, Decision Trees and Random Forest.
- Started by cleaning the dataset. Then performed predictive analytics using the three models to predict the churn value.
- As a conclusion, all the three models could be used equally well with an accuracy of almost 78%.

Education

New York University

Master of Science - MS, Computer Science · (2017 - 2019)

Thadomal Shahani Engineering College

Bachelor of Engineering (B.E.), Information Technology · (2013 - 2017)
